

Chase covers are installed on top of your chimney and keep out rain, snow and pests. They fit around the top of your chimney like a shoebox cover. Many homes are built using galvanized chase covers, which rust and cause stains that run from the top of your chimney.

A National Chimney chase cover is constructed of the highest quality 304 stainless steel, providing the highest resistance to rust and corrosion. They are stonger, look new longer and have a lifetime warranty. Out crossbreak design will prevent pooling of rain, snow and ice. Chase covers also lessen water erosion to your brick and mortar.

Stainless Steel Chase Cover

Copper Chase Cover

Why settle for a non-functioning or poorly functioning chase cover...

Why does my chimney need a chase cover?

What is a chase cover?

Chase covers are metal pans that sit on top of the chimney chase. Their purpose is to shed water away from the chimney protecting the body from water penetration. Unfortunately, many chase covers are poorly designed or made of materials that develop leaks after only a few years. The "Bird Bath" effect occurs when a metal chimney chase has a low spot that collects water. Standing water causes the cover to rust prematurely, eventually destroying it.

Why you may need a new chase cover:

- Tired of rust streaks down your chimney?
- Annoyed with water leakage?
- Afraid of what the winter weather may bring?

Before new chimney chase

Chase is rusted and no longer functioning correctly or safely.

After new chimney chase

New Stainless Steel chase is rust resistant and functions properly for years of safe operation.

Why choose a National Chimney stainless steel chimney chase cover?

- Chase covers are custom manufactured by National Chimney Supply to fit any size chimney.
- Chase covers manufactured by National Chimney are made of 24 gauge stainless steel and have a lifetime warranty.
- A crossbreak bend on the top of chase cover creating a dome shape to prevent snow and water from collecting on the top and eliminate sagging of the chase cover.
- National Chimney chase covers have welded corner seams and welded 2" high collars on all openings.
- National Chimney chase covers have a 1/2" drip edge to shed water away from the sides of the chimney chase.
- Custom chase covers can be made in different gauge thicknesses (22 gauge, 20 gauge, and 18 gauge) as needed per installation.
